

Stack card description of M8VL4

M8VL4 is a machine to make combat decisions in real-time.

The package is a computer chip or ASIC to fit in any military hardware.

Input is the printed word that is translated into a logic script for instant evaluation.

The combat scenario reduces logically into exactly one of 8,358,608 decisions.

Output is a number in the range of 0% for contradiction to 100% for proof.

M8VL4 is fully ITAR-compliant for sale anywhere.
